ID30B – ‘Event management’ communication

Event manager

wid30bpcflex1

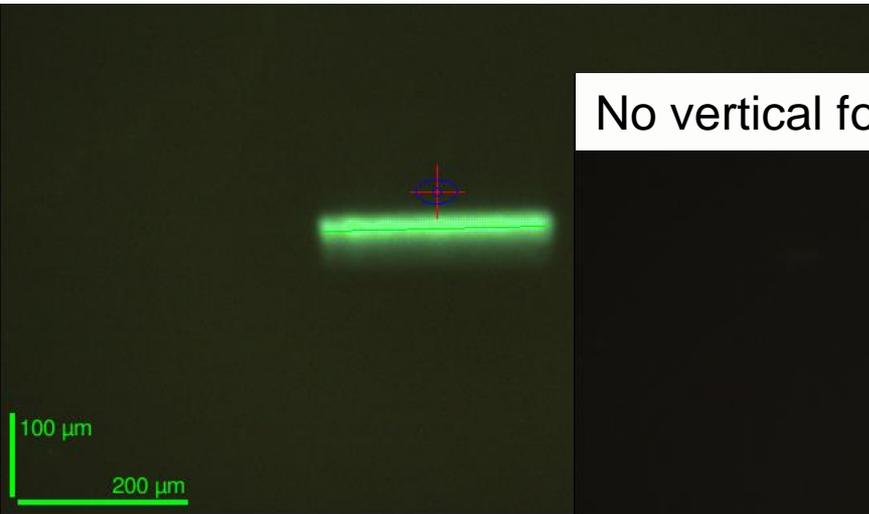

ID30B – Variable focusing capabilities

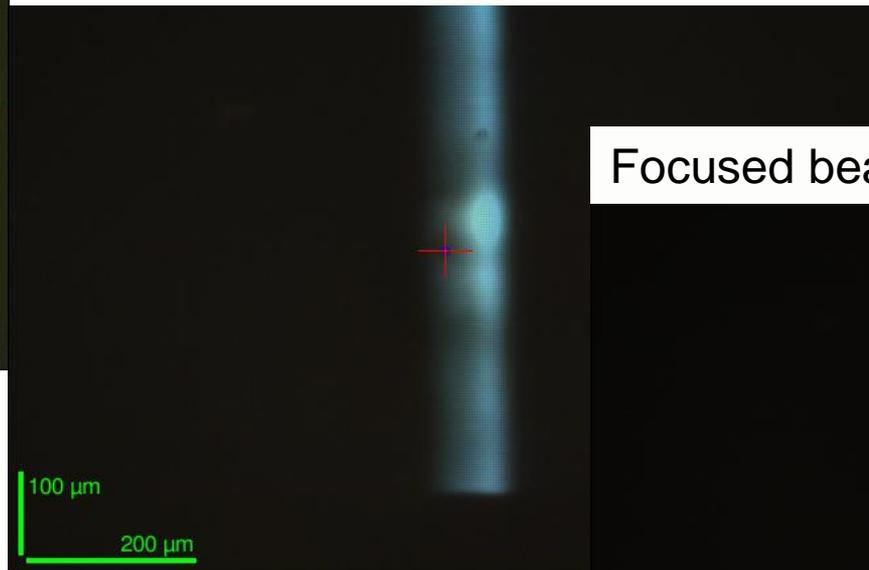

Flux $\sim 6 \times 10^{12}$ phs/sec/mm² at 12.7 keV

Beam size: $< 40 \mu\text{m}^2$

Vertical focusing, no horizontal focusing
(mirror unbent)

No vertical focusing – mirror bent

Focused beam

ID30B – Apertures (75, 50, 30, 20, 10 μm^2)

ID30B – Good data quality

R-meas = redundancy independent R-factor (intensities)
Diederichs & Karplus (1997), Nature Struct. Biol. 4, 269-275.

CC(1/2) = percentage of correlation between intensities from
random half-datasets. Correlation significant at
the 0.1% level is marked by an asterisk.
Karplus & Diederichs (2012), Science 336, 1030-33

Anomal
Corr = percentage of correlation between random half-sets
of anomalous intensity differences. Correlation
significant at the 0.1% level is marked.

SigAno = mean anomalous difference in units of its estimated
standard deviation ($|F(+)-F(-)|/\text{Sigma}$). F(+), F(-)
are structure factor estimates obtained from the
merged intensity observations in each parity class.

Nano = Number of unique reflections used to calculate
Anomal_Corr & SigAno. At least two observations
for each (+ and -) parity are required.

SUBSET OF INTENSITY DATA WITH SIGNAL/NOISE ≥ -3.0 AS FUNCTION OF RESOLUTION

FlexHCD MxCuBE integration

The screenshot displays the mxcube (opid-30b) control interface. The main window is titled "mxcube (opid-30b)" and includes a menu bar with "File", "Instrumentation", and "Help". Below the menu bar are buttons for "Collect", "System", "Feedback", and "Chat".

The interface is divided into several sections:

- User Information:** Shows the user as "opid-30b" and includes a "Logout" button.
- Sample list:** A tree view on the left shows sample positions. Position "3:3" is selected and highlighted in blue, with a status message "Centring done!".
- Sample centring:** A central panel titled "Sample centring" shows the status "Ready" and "Flex". It includes a "Reset" button and a list of actions: "Scan", "Park", and "Init".
- Flex Actions:** A section titled "Flex Actions" contains buttons for "Scan", "Park", and "Init".
- Contents:** A section titled "Contents" shows a grid of baskets (Basket 1 to Basket 23) with their respective contents. A "Reload selected baskets" button is located below the grid.
- Machine current:** A panel on the right shows machine parameters: "158.8 mA", "24°±1bunch", "02:40", "Flux: +0.00 ph/s", "Energy", "Current: 12.3000 keV", "1.008 Å", "Resolution", "Current: 3.488 Å", "700.00 mm", "Transmission", "Current: 100.00%", and "Set to: Filters".
- Safety shutter:** A panel showing the "Safety shutter" is "closed".
- Fast shutter:** A panel showing the "Fast shutter" is "closed".
- Beamstop:** A panel showing the "Beamstop" is "out".
- Capillary:** A panel showing the "Capillary" is "out".
- Current users:** A panel showing "Current users" and "My name: bacon".

At the bottom of the interface, there are three status messages:

- [2015-11-27 18:15:36] All centred positions associated with this sample will be lost.
- [2015-11-27 18:17:44] Centring in progress. Please save the suggested centring or re-center
- [2015-11-27 18:18:02] Centring saved

A. Khadrouche and G. Papp (EMBL) and A. Beteva (ESRF)

ID30B – MD2S allows plate screening capability

ID30B SBS format plate gripper

In situ plate data collection in MxCuBE

The screenshot displays the MxCuBE software interface for in situ plate data collection. The main window is titled "mxcube (mx-1743)" and includes a menu bar with "File", "Instrumentation", and "Help".

Sample centring: The "Sample position" section shows Omega at 316.36, Kappa at 0.00, and Phi at 0.00. The "Sample video" section shows Back Light at 0.60, Focus at -0.729, and Front Light at 0.0. A central video window displays a sample image with a 100 µm scale bar and a "Point no. 2 selected" label. The "Aperture diameter" is set to 50.

Collection method: The "Standard Collection" section includes "Acquisition" parameters: Oscillation range (0.1), First image (1), Oscillation start (316.36), Number of images (10), Kappa (0.0), and Phi (0.0). Other parameters include Detector mode, Exposure time (0.037 s), Energy (12.7 keV), Resolution (1.997 Å), and Transmission (100.0%).

Data location: The "Folder" field is set to "/data/visitor/mx1743/id30b/20151104/RAW_DATA". The "File name" is "xyla_23_###.cbf" and the "Prefix" is "xyla". The "Run number" is 23.

Processing: The "N.o. residues" is 200, and the "Space group" is set to a dropdown menu. The "Unit cell" parameters are a: 0, b: 0, c: 0, alpha: 0, beta: 0, gamma: 0.

Machine current: The top right corner shows a machine current of 185.4 mA, a flux of +0.00 ph/s, and a current of 12.7000 keV and 0.976 A.

Safety: The "Safety shutter" and "Fast shutter" are both closed. The "Beamstop" is in, and the "Capillary" is unknown.

Current users: The current user is "bacon".

Log: The bottom left corner shows a log of events: [2015-11-04 11:49:00] Asking for input files writing, [2015-11-04 11:49:00] Preparing acquisition, start=314.730000, wedge size=10, and [2015-11-04 11:49:04] Collection completed.

ID30B - Plate screening capability (2016)

Plate manipulator
nozzle

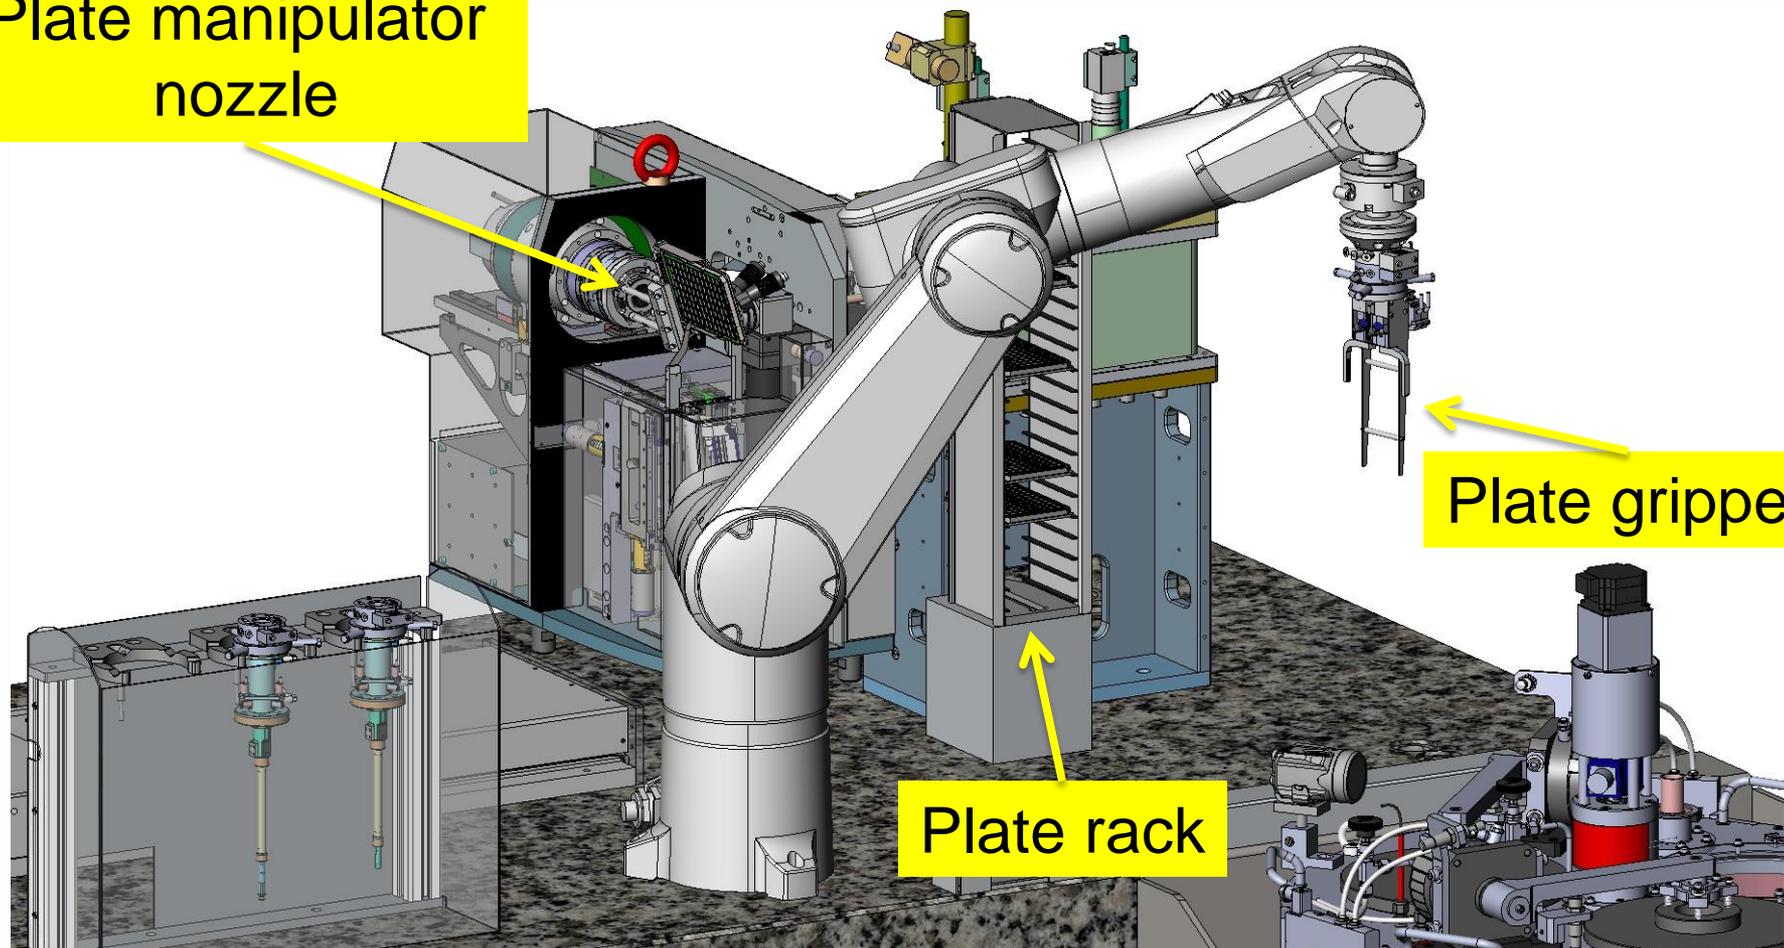

Plate gripper

Plate rack

ID30B – To do

Immediate future (February 2016)

- Finalise FlexHCD integration
- Integrate *in situ* plate screening
- Software improvements

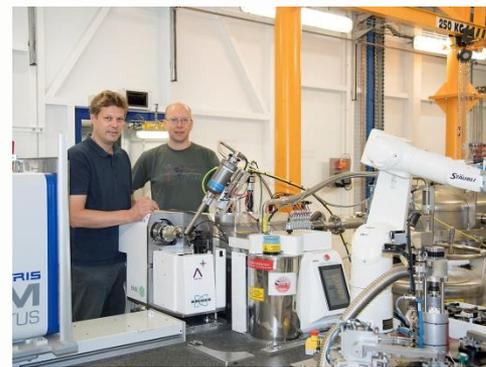

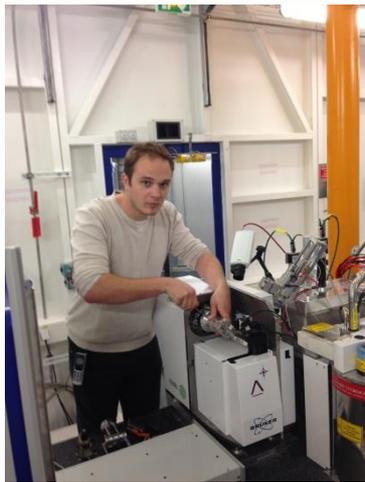

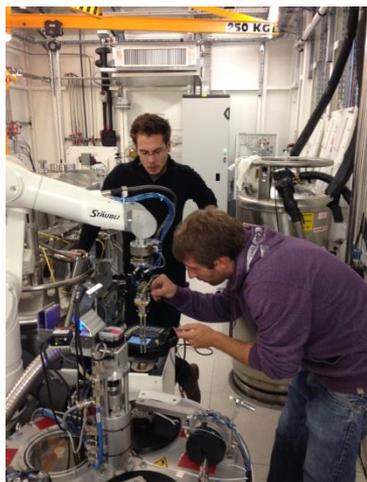

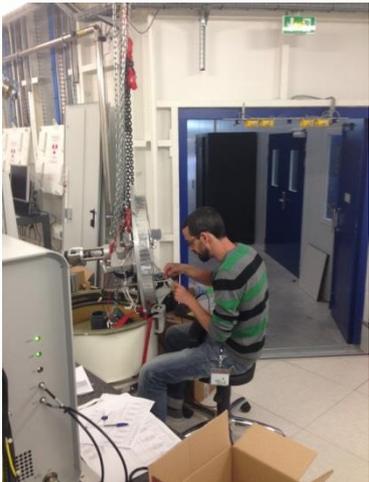

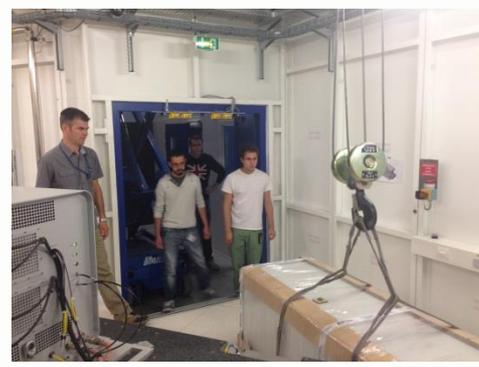

Near future

- Find a solution to (or minimise) the beam drift
- Further investigate the vertical focusing problem
- Work on variable focusing routines (coordinated bender movement)
- Introduce Unipuck mounting and test miniSpine mounting capabilities

Future plans

- Test microfluidic chip data collection possibilities
- Automate data collection (MASSIF workflows)
- Commission phase plate (Daniele)

Many thanks to all involved
